**DETAILED ACTION**

***Election/Restrictions***

1. Claims 9-11 have been withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 12/03/2008.
2. Applicant's election with traverse of Group I, claims 1-8, in the reply filed on 12/03/2008 is acknowledged. The traversal is on the ground(s) that the 2 Groups of Inventions constitute a single general inventive concept involving the same or technical feature. This is not found persuasive because the method claims include steps of fabricating an organic mold that are not recited in the product claims.

The requirement is still deemed proper and is therefore made FINAL.

***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an

international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

4. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by Tamura et al. (US Pat. 7,195,857).

Tamura discloses a photocurable resin composition for use in forming micropatterns, the resin composition comprising a prepolymer A-1 that includes urethane acrylate, an ethylenically unsaturated group B such as a methacrylate, a photoinitiator C, a thermocurable resin material that includes silicon resin. The mixing ratio of A-1:B is 95:5 to 50:50. The amount of the photoinitiator is 0.1-20 parts by weight based on 100 parts by weight of total A-1 and B. See Examples.
